DETAILED ACTION

Claim Rejections - 35 USC § 112

- 1. The following is a quotation of the second paragraph of 35 U.S.C. 112:
 - The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.
- 2. Claims 1,2, and 5 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.
 - a. The recitation of "said first pocket surface" in lines 12 and 14 of claim 1 and in lines 17 and 19 of claim 5 lacks antecedent basis.
 - b. The recitation of "said second pocket surface" in line 12 of claim 1 and in line 17 of claim 5 lacks antecedent basis.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 4. Claims 1-5 and 7-9 are rejected under 35 U.S.C. 102(b) as being anticipated by Baden.

Baden discloses in figures 1,2, and 5, a retainer for rolling bearings comprising a rolling element receiving pocket having a pair of ring shaped side plates, a pair of pillars, a first pocket surface formed in said pair of pillars and being arc shaped, a second pocket surface formed on said pair of ring shaped side plates, and an escaping recess 15 located between said first pocket

Art Unit: 3682

surface and said second pocket surface. Baden further discloses a roller run-out preventing portion formed on said pair of pillars and being arc shaped wherein a length of said roller run-out portion being less than or equal to a length of a roller inserted in said rolling element receiving pocket and greater than 0.75 times the length of said roller.

The limitation that the pocket surfaces are formed by machining with a tool member or multiply tool members whose machining part has a sectional contour which coincides with a sectional configuration of said pocket surfaces after formation of said pocket does not further limit the retainer as claimed. Even though product-by-process claims are limited and defined by the process, determination of patentability is based on the product itself. The patentability of a product does not depend on its method of production. See MPEP §2113.

Response to Arguments

5. Applicant's arguments with respect to claims 1-5 and 7-9 have been considered but are most in view of the new ground(s) of rejection. Baden clearly discloses a roller run-out prevent portion which is less than or equal to a length of a roller and greater than 0.75 times the length of the roller. As presently claimed, the structure of the retainer is merely limited to be within the range limitations.

Conclusion

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Timothy P McAnulty whose telephone number is 703.308.8684. The examiner can normally be reached on Monday-Friday (7:30-5:00).

Application/Control Number: 09/559,820

Art Unit: 3682

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, David Bucci can be reached on 703.308.3668. The fax phone numbers for the organization where this application or proceeding is assigned are 703.305.7687 for regular communications and 703.305.7687 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is 703.308.1113.
